

Rhea Sander

Software engineer for ML systems and LLM agents

rhea.sander@example.com · linkedin.com/in/example · github.com/example · Based in Bengaluru, open to relocation or remote

Summary

I build ML systems and LLM agents end to end, from the model to the interface people use, and run them in production.

Experience

ML platform engineer, Halden Systems Jul 2022 to present

- Cut model rollout time from two days to 40 minutes, measured across 30 releases, by building a registry-driven deploy pipeline with automatic rollback.
- Reduced escaped solder defects by 38% over a quarter, measured at final test, by training and shipping a segmentation model with drift monitoring.
- Lowered inference p95 from 820 ms to 190 ms at 500 requests per second, measured with k6, by building a batching and caching gateway.

Software engineer, Corvid Logistics Jul 2021 to Jun 2022

- Brought checkout p99 from 1.9 s to 280 ms at 2,000 orders a minute, measured with k6, by splitting the order flow into services with a transactional outbox.
- Cut flaky test failures in CI from 12% of runs to under 1%, measured over two months, by moving integration tests to Testcontainers.

Selected projects

- **Support agent:** Raised a support agent's task success from 61% to 84%
- **Text-to-SQL:** Answered 78% of analysts' questions correctly, up from 52%
- **Defect detection:** Cut escaped visual defects by 38% on a circuit-board line
- **Predictive maintenance:** Cut false maintenance alarms by 30% without missing failures

Skills

SDE	Go and Java services under load; Event-driven design (Kafka, outbox, idempotency); Load and end-to-end testing (k6, Testcontainers, Playwright); Web graphics and performance (WebGPU, TypeScript)
LLM	Tool-using agents with guardrails; Retrieval (pgvector, re-ranking); LLM evaluation harnesses and CI gates; Text-to-SQL with query validation
AI/ML	Computer vision (segmentation, detection); Tabular models and leakage-safe evaluation; PyTorch training and ONNX export
MLOps	Model serving (Triton) and batching; Experiment tracking and registry (MLflow); Drift monitoring; Kubernetes and CI/CD with rollback

Education and awards

- B.Tech in Computer Science, Institution name, 2021
- Hackathon award, 2020
